List of Tables	xiv
Acknowledgments	xvii
Foreword	xix
1. INTRODUCTION	1
1.1 Why Source Code Optimization?	3
1.1.1 Abstraction Levels of Code Optimization	4
1.1.2 Survey of the traditional Code Optimization Process	5
1.1.3 Scopes for Code Optimization	8
1.2 Target Application Domain	10
1.3 Goals and Contributions	11
1.4 Outline of the Book	12
2. EXISTING CODE OPTIMIZATION TECHNIQUES	15
2.1 Description Optimization	16
2.2 Algorithm Selection	17
2.3 Memory Hierarchy Exploitation	17
2.4 Processor-independent Source Code Optimizations	19
2.5 Processor-specific Source Code Optimizations	20
2.6 Compiler Optimizations	21
2.6.1 Loop Optimizations for High-Performance Computing	21
2.6.2 Code Generation for embedded Processors	23
3. FUNDAMENTAL CONCEPTS FOR OPTIMIZATION AND EVALUATION	25
3.1 Polyhedral Modeling	25

3.2	Optimization using Genetic Algorithms	29
3.3	Benchmarking Methodology	34
3.3.1	Profiling of Pipeline and Cache Performance	34
3.3.2	Compilation for Runtime and Code Size Measurement	35
3.3.3	Estimation of Energy Dissipation	37
3.4	Summary	38
4.	INTERMEDIATE REPRESENTATIONS	41
4.1	Low-level Intermediate Representations	42
4.1.1	GNU RTL	42
4.1.2	Trimaran ELCOR IR	43
4.2	Medium-level Intermediate Representations	44
4.2.1	Sun IR	44
4.2.2	IR-C / LANCE	45
4.3	High-level Intermediate Representations	47
4.3.1	SUIF	47
4.3.2	IMPACT	48
4.4	Selection of an IR for Source Code Optimization	48
4.5	Summary	51
5.	LOOP NEST SPLITTING	53
5.1	Introduction	53
5.1.1	Control Flow Overhead in Data dominated Software	54
5.1.2	Control Flow Overhead caused by Data Partitioning	55
5.1.3	Splitting of Loop Nests for Control Flow Optimization	57
5.2	Related Work	60
5.3	Analysis and Optimization Techniques for Loop Nest Splitting	62
5.3.1	Preliminaries	64
5.3.2	Condition Satisfiability	67
5.3.3	Condition Optimization	69
5.3.3.1	Chromosomal Representation	70
5.3.3.2	Fitness Function	73
5.3.3.3	Polytope Generation	79
5.3.4	Global Search Space Construction	80
5.3.5	Global Search Space Exploration	82
5.3.5.1	Chromosomal Representation	83
5.3.5.2	Fitness Function	84
5.3.6	Source Code Transformation	90
5.3.6.1	Generation of the splitting If-Statement	90

<i>Contents</i>	vii
5.3.6.2 Loop Nest Duplication	92
5.4 Extensions for Loops with non-constant Bounds	94
5.5 Experimental Results	100
5.5.1 Stand-alone Loop Nest Splitting	101
5.5.1.1 Pipeline and Cache Performance	102
5.5.1.2 Execution Times and Code Sizes	107
5.5.1.3 Energy Consumption	109
5.5.2 Combined Data Partitioning and Loop Nest Splitting for energy-efficient Scratchpad Utilization	110
5.5.2.1 Execution Times and Code Sizes	111
5.5.2.2 Energy Consumption	113
5.6 Summary	116
6. ADVANCED CODE HOISTING	119
6.1 A motivating Example	119
6.2 Related Work	124
6.3 Analysis Techniques for Advanced Code Hoisting	129
6.3.1 Common Subexpression Identification	130
6.3.1.1 Collection of equivalent Expressions	130
6.3.1.2 Computation of Live Ranges of Expressions	132
6.3.2 Determination of the outermost Loop for a CSE	139
6.3.3 Computation of Execution Frequencies using Polytope Models	141
6.4 Experimental Results	154
6.4.1 Pipeline and Cache Performance	154
6.4.2 Execution Times and Code Sizes	158
6.4.3 Energy Consumption	160
6.5 Summary	161
7. RING BUFFER REPLACEMENT	163
7.1 Motivation	164
7.2 Optimization Steps	169
7.2.1 Ring Buffer Scalarization	170
7.2.2 Loop Unrolling for Ring Buffers	171
7.3 Experimental Results	173
7.3.1 Pipeline and Cache Performance	173
7.3.2 Execution Times and Code Sizes	176
7.3.3 Energy Consumption	178
7.4 Summary	179

8. SUMMARY AND CONCLUSIONS	181
8.1 Summary and Contribution to Research	181
8.2 Future Work	184
Appendices	188
Experimental Comparison of SUIF and IR-C/LANCE	189
Benchmarking Data for Loop Nest Splitting	191
B.1 Values of performance-monitoring Counters	191
B.1.1 Intel Pentium III	191
B.1.2 Sun UltraSPARC III	193
B.1.3 MIPS R10000	194
B.2 Execution Times and Code Sizes	195
B.3 Energy Consumption of an ARM7TDMI Core	197
B.4 Combined Data Partitioning and Loop Nest Splitting	198
B.4.1 Execution Times and Code Sizes	198
B.4.2 Energy Consumption	199
Benchmarking Data for Advanced Code Hoisting	201
C.1 Values of performance-monitoring Counters	201
C.1.1 Intel Pentium III	201
C.1.2 Sun UltraSPARC III	202
C.1.3 MIPS R10000	203
C.2 Execution Times and Code Sizes	203
C.3 Energy Consumption of an ARM7TDMI Core	205
Benchmarking Data for Ring Buffer Replacement	207
D.1 Values of performance-monitoring Counters	207
D.1.1 Intel Pentium III	207
D.1.2 Sun UltraSPARC III	208
D.1.3 MIPS R10000	208
D.2 Execution Times and Code Sizes	208
D.3 Energy Consumption of an ARM7TDMI Core	209
